Re: Application for Backend Engineer at Google

Dear Hiring Manager,

I am writing to express my sincere interest in the Backend Engineer position at Google. As a Backend and AI Engineer with over three years of experience building production-grade systems, I have long admired Google's commitment to engineering excellence, scalable infrastructure, and meaningful technological impact. The opportunity to contribute to a team that operates at global scale is one I approach with great enthusiasm and a strong sense of purpose.

Throughout my career, I have developed a solid foundation in backend engineering across diverse technology stacks and environments. At Centival Software Solutions, I design and deliver scalable APIs, microservices architectures, and AI-integrated backends using Python, FastAPI, and cloud-native tools on AWS. Prior to this, at eSupport Technologies, I progressed from Associate Software Engineer to a full-stack role where I led the development of enterprise-grade platforms using Laravel, MySQL, and PostgreSQL, while also contributing to client delivery and project coordination. This progression has sharpened my ability to write clean, maintainable code and architect systems that perform reliably under real-world conditions.

Beyond core backend development, I bring hands-on experience integrating machine learning models into production pipelines, working with both relational and non-relational databases including MongoDB, and building frontend interfaces with Vue.js and TypeScript when cross-functional collaboration demands it. I understand the full software lifecycle — from system design and API development to deployment, monitoring, and iteration — which allows me to make meaningful contributions across engineering teams. I hold a BSc in Software Engineering from SLIIT, which provided a rigorous academic foundation that complements my practical experience.

I am confident that my technical background, problem-solving mindset, and genuine passion for building systems that matter make me a strong candidate for this role. I would welcome the opportunity to discuss how my experience aligns with the work being done at Google. Thank you sincerely for your time and consideration.

Yours sincerely,

Kavidu M Kulathunga
